ILAB-10

Connect to a MongoDB server using MongoDB Compass.

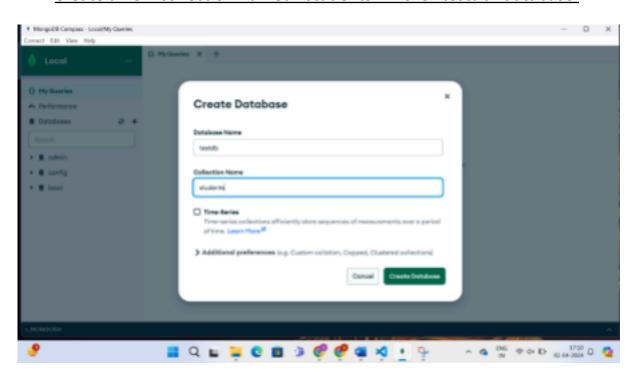

Create a new database named "testdb" in MongoDB Compass.

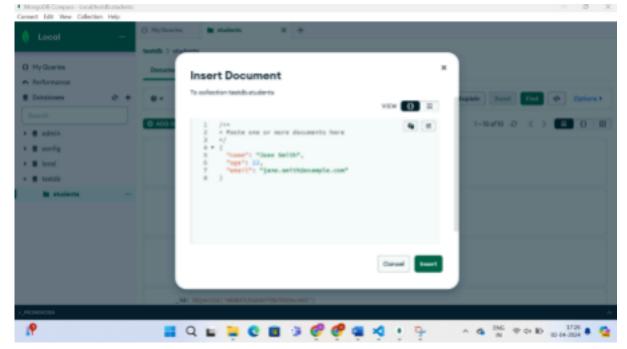

Prateek22IT3030 **LAB**: 10

Create a new collection named "students" in the "testdb" database.

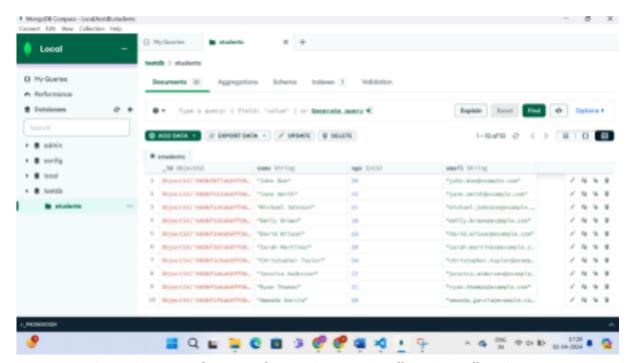

Insert ten documents into the "students" collection with the following fields: name, age, and email.

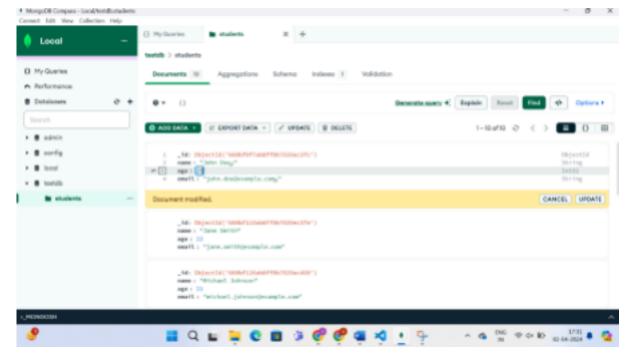

View the contents of the "students" collection.

Prateek 22IT3030 LAB : 10

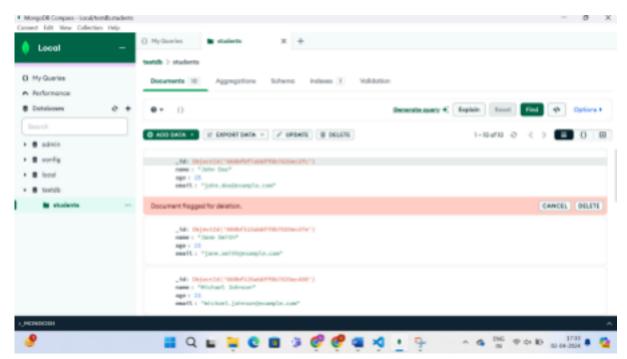

Update the age of a specific student in the "students" collection.

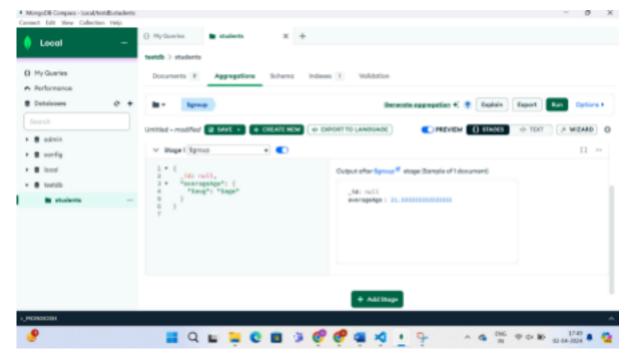

<u>Delete a document from the "students" collection based on a specific condition.</u>

Prateek 22IT3030 LAB : 10

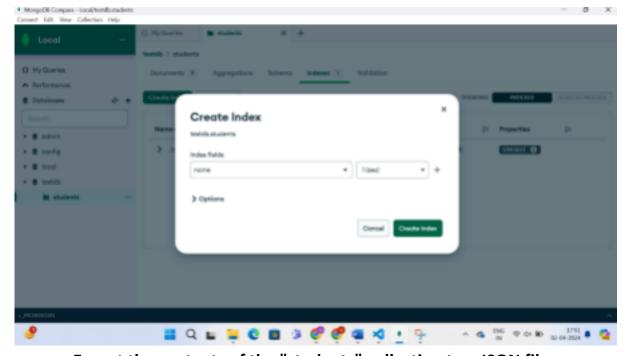

Use the aggregation pipeline to calculate the average age of all students in the "students" collection.

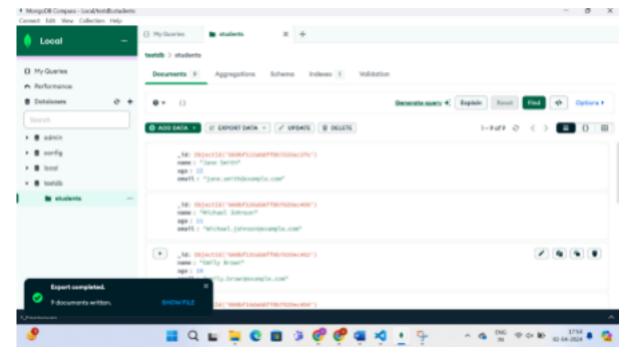

Create an index on the "name" field in the "students" collection.

Prateek
22IT3030
LAB: 10

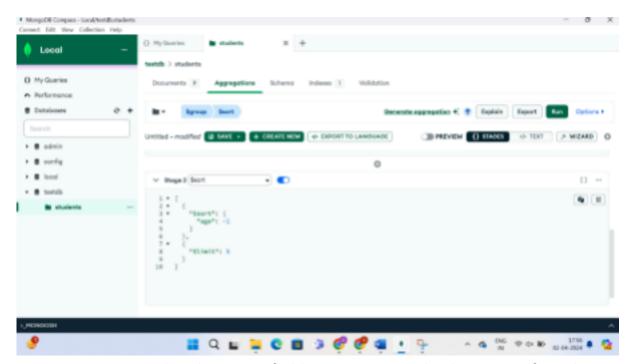

Export the contents of the "students" collection to a JSON file.

<u>Perform a complex aggregation operation to find the top 5 oldest students in the "students" collection.</u>

Prateek22IT3030
LAB: 10

Create a geospatial index on a field representing the location of students.
